this book is the result of a meeting held in I Aquila Italy from the 19th to the 23rd of June 1989 the aim of the meeting was to gather together the people actively working on the cosmic microwave background radiation both from an experimental and from a theoretical point of view in view of the intensive current activity in this field including ongoing COBE and forthcoming RELIC II ISO AELITA etc space missions a meeting fully dedicated to this important topic was timely the

meeting also celebrated the 25th anniversary of the microwave background discovery made in 1964 by the nobel prize winners a penzias and r wilson we greatly regret that we were not able to have them at the meeting there is of course another person whose absence we regret namely r h dicke who motivated a generation of experimentalists and theoreticians to open and study this new field of research as organizers of the meeting we would like to express our gratitude to the people who contributed to its success we want to thank the members of the scientific organizing committee for their assistance suggestions and encouragement the invited speakers for their excellent presentations and the chairmen for their help in handling the various sessions we would like to thank p palazzi for her help in secretarial work dr l

the large scale structure of the universe is dominated by vast voids with galaxies clustered in knots sheets and filaments forming a great cosmic web in this personal account of the major astronomical developments leading to this discovery we learn from laird a thompson a key protagonist how the first 3d maps of galaxies were created using non mathematical language he introduces the standard model of cosmology before explaining how and why ideas about cosmic voids evolved referencing the original maps reproduced here his account tells of the competing teams of observers racing to publish their results the theorists trying to build or update their models to explain them and the subsequent large scale survey efforts that continue to the present day this is a well documented account of the birth of a major pillar of modern cosmology and a useful case study of the trials surrounding how this scientific discovery became accepted

from the reviews astronomy and astrophysics abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences it is the most important english language abstracting journal in the mentioned branches the abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material the aaa is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences as such it represents a necessary ingredient of any astronomical library all over the world space science reviews 1 dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use the series appears to be so complete in its coverage and always less than a year out of date that i shall certainly have to make a little more space on those shelves for future
